S

a driving force receiving portion for receiving the driving force for feeding the developer in said main body toward the opening, the driving force being supplied from a driving force supplying portion provided in the image forming apparatus,

wherein said driving force receiving portion is engageable with the driving force supplying portion by relative movement toward each other, and

wherein said driving force receiving portion includes a surface fastener for disengageable engagement with a surface fastener included in the driving force supplying portion.

And Control

2. (Canceled) A driving force receiving member according to Claim 1, wherein the driving force applying portion is provided with a surface fastener engageable with the surface fastener of said driving force receiving portion.

3. (Amended) A developer container according to Claim 1, wherein each of said surface fastener of said driving force receiving portion and the surface fastener of the driving force supplying portion includes a plurality of elastically deformable projections,

wherein said projections of said driving force receiving portion are engageable with the projections of the driving force supplying portion.

4. (Amended) A developer container according to Claim 3, wherein each of said plurality of projections of said surface fastener of said driving force receiving

Sol Ant portion and the plurality of projections of the driving force supplying portion is thicker at a free end portion than at a base end portion thereof.

- 5. (Amended) A developer container according to Claim 3, wherein one of said plurality of projections of said driving force receiving portion and the plurality of the projections of driving force supplying portion are in the form of loops and the other of said plurality of projections of said driving force receiving portion and the plurality of projections of the driving force applying portion are configured in the form of hooks.
- 6. (Amended) A developer container Claim 3, wherein each of said plurality of projections of said driving force receiving portion and the plurality of projections provided of the driving force supplying portion is configured in the form of a frustum of a pyramid.
- 7. (Amended) A developer container Claim 3, wherein a free end portion of each of said plurality of projections of said driving force receiving portion and the plurality of projections of the driving force supplying portion is rounded.

8. (Canceled) A driving force receiving member Claim 3, wherein the projections of said surface fasteners of said driving force applying portion and said driving force receiving portion are elastically deformable.

9. (Canceled) A driving force receiving member according to Claim 3, wherein one of said driving force applying portion and said driving force receiving portion these provided with an indexing projection, and the other of them this provided with a recess engageable with said projection.

10. (Canceled) A driving force receiving member according to Claim 9, wherein said projection and said recess are disposed substantially at the center of rotations of said driving force applying portion and said driving force present time.

11. (Amended) A developer container according to Claim 1, wherein said driving force receiving member includes a projection, which projects toward the driving force supplying member, so as to surround a projection formed on the driving force supplying portion.

12. (Amended) A developer container according to Claim 11, wherein a free end of said projected portion is provided with a bent portion.

13. (Amended) A developer container according to Claim 11, wherein a free end of said projected portion is provided with a folded-back portion.

14. (Canceled) A driving force receiving member according to any one of Claims 1-13, wherein said driving force receiving member is provided in a developer container for supplying a developer to a developer receiving device of the main assembly

of the image forming apparatus, the developer container being detachably mountable to the main assembly of the image forming apparatus.

comprising:

15. (Amended) A developer container according to Claim 1, further

a sealing member for unsealably sealing the opening,

a feeding member for feeding the developer in said main body toward the

opening,

wherein said feeding member is integrally rotatable with said sealing member by the driving force received by said driving force receiving portion.

16. (Amended) A developer container according to Claim 1, wherein said driving force receiving portion is provided at one end portion of said main body adjacent to the opening, and said main body is rotatable by the driving force received by said driving force receiving portion.

17. through 47. (Canceled)

REMARKS

Favorable reconsideration and withdrawal of the objection and rejections set forth in the above-mentioned Official Action in view of the foregoing amendments and the following remarks are respectfully requested.
